

2nd Annual University of Delaware Undergraduate Workshop in Cognitive and Brain Sciences

Are you an undergraduate interested in learning more about cognitive and brain sciences? If so, the Department of Psychological and Brain Sciences at the University of Delaware is holding its 2nd Annual Summer Workshop in Cognitive and Brain Sciences from June 4th-15th, 2018. This program is an intensive workshop for undergraduates who are interested in cognitive research. Participants will engage in immersive training in cognitive and brain sciences, which includes both formal coursework, interactive teaching, and hands-on experience with functional neuroimaging, non-invasive brain stimulation, cognitive neuropsychological research, and more. This program is open to permanent residents and citizens of the United States.

Thanks to funding from the National Science Foundation, travel, tuition, room and board will be provided for the entire two-week program. Furthermore, selected workshop attendees will have the opportunity to engage in cognitive neuroscience research over the entire summer at the University of Delaware. Those students will be provided with a stipend, in addition to workshop expenses.

We encourage all undergraduates with a strong interest in the cognitive and brain sciences to apply. We also encourage students from underrepresented backgrounds to submit applications. Applications are due **March 1st**. For more information, please go to <https://www.psych.udel.edu/brainworkshop>. If you have any questions, please contact the workshop organizers (Drs. Jared Medina & Anna Papafragou) at brainworkshop@psych.udel.edu.
